

Rockleigh, New Jersey – Elcom Technologies, Inc. announced a three year extension to an existing agreement for their PLL controlled oscillator design that provides extremely low phase noise and excellent MTBF. The total value of the agreement exceeds \$6M USD and reflects Elcom’s leadership in providing solutions for commercial test equipment companies. “We are especially pleased that we were selected as an alternative to the customer’s captive capabilities. It reflects our ability to provide leading edge technology at a competitive price” said Jim Davis, CEO of Elcom Technologies.

Elcom designs and manufactures RF and Microwave instruments and modules for ATE, Aerospace/ Defense, SIGINT and SATCOM applications. Proprietary technologies include low phase noise fast switching direct analog synthesis, low noise indirect PLL designs, and integrated RF DSP up to 40GHz.
