

Elcom Technologies Announces VHF/UHF Receiver Contract Awards

Rockleigh, New Jersey – Elcom Technologies, Inc. announced today that it had received two orders totaling \$1 million dollars for Very High Frequency and Ultra High Frequency (VHF/UHF) receivers from an international defense customer. The Elcom SIR 3000 receiver series cover the frequency range of 20MHz to 3000MHz and IF output bandwidths of up to 80 MHz. Industry leading scanning speed and a flexible SDR (Software Defined Radio) architecture are some of the contributions the SIR 3000 series makes to the COMINT / SIGINT market. It also provides state of the art RF DSP resulting in exceptional spurious performance.

Jim Davis, Elcom Technologies CEO, stated “We continue to work with customers to develop state of the art SIGINT solutions based on our core competencies in high speed switching synthesizers and RF DSP. These orders are another example of listening to our customers and working with them to develop cost effective solutions with superior technical attributes. We are excited about our future prospects in this new market, especially as we experience success against many of the older and larger SIGINT solutions providers”.

Elcom designs and manufactures RF and Microwave instruments and modules for ATE, Aerospace/ Defense, SIGINT and SATCOM applications. Proprietary technologies include low phase noise fast switching direct analog synthesis, low noise indirect PLL designs, and RF DSP up to 40GHz.
