Elcom Technologies Launches New Website Design

Rockleigh, New Jersey – Coinciding with the first delivery of its newest SIR-4001 receiver (0.5 - 18 GHz), part of the FlxGen™ family of Signal Intelligence (SIGINT) receivers and downconverters, Elcom Technologies, Inc. recently announced the launch of its newly designed, updated website. The recently restructured and reorganized website includes detailed product material, useful company information, news and events.

Visitors to www.elcom-tech.com will find extensive information on the company's portfolio in a user friendly format. The new updated site provides more in-depth content, making it easier for navigation by the engineering community. The layout emphasizes more options, with improved access to specific categories. Highlights and specifications of each product can be seen at a glance.

Orli Fabian, Marketing Services Manager of Elcom, commented "here at Elcom we have an on-going commitment to provide our customers with accurate information. As part of this goal, the redesign of our website allows us to better inform users about our portfolio of products, main advantages and future developments. We hope that finding the exact product for their company needs is now a simpler process."

Elcom Technologies designs and manufactures a wide range of RF and Microwave synthesizers used in military and commercial applications. Recent additions to our product portfolio include receivers and converters used in SIGINT and SATCOM environments.

For additional information, please visit our redesigned website www.elcom-tech.com or contact Elcom Technologies Sales Department at 201-767-8030 x 286; sales@elcom-tech.com
